

DETAILING TEMPLATE CUSTOMIZATION SERVICE

SDS/2

A NEMETSCHEK COMPANY

WHAT ARE DETAILING TEMPLATES?

Drafting templates are files that can be modified to match specific standards in a drafting office. SDS/2 then uses those to help automatically generate drafting drawings. These are different from the SDS/2 system details which are not customizable.

WHAT IS THE DETAILING TEMPLATE CUSTOMIZATION SERVICE?

This service, which can be purchased by any SDS/2 user, allows detail drawings to be customized to their detailing and fabrication standards. This is done by modifying detailing template files that will provide dimensions, labels, etc., to match their standards. This service can be purchased by member type and the files will be maintained by SDS/2 through future releases.

HOW CAN THIS HELP YOU?

Customizing the detailing templates to match your detailing and fabrication standards will reduce time spent on cleanup.

This will increase the efficiency of your detailers, which will in turn reduce cost on a project.

Accuracy of drawings will increase, as special labels will be included in the customized templates, therefore not requiring the detailer to remember to place them each time.

When working with multiple fabricators, a set of detailing templates can be created for each, therefore following standards required by the different shops.

These files can be given to your subcontractors, eliminating inconsistencies.

WHAT IS REQUIRED FROM ME TO USE DETAILING TEMPLATE CUSTOMIZATION SERVICES?

An SDS/2 v2016 or newer project, containing the member types and framing situations for which you would like details improved, is required.

SDS/2 will also need an example of finalized detail drawings to help create templates.

WHO SHOULD I CONTACT FOR MORE INFORMATION?

Contact our SDS/2 sales team for more information by either phone — 800.443.0782 — or email sales@sds2.com.

Please fill out the information below and return this portion to an SDS/2 representative.

Name: _____

Company: _____

Email: _____

Phone: _____

To better help us determine the level of customization needed, please answer the following:

What member types would you be considering custom templates for? (Check all that apply.)

- Beams
 - Columns
 - Vertical Braces
 - Horizontal Braces
 - Handrails
 - Stairs
 - Ladders
 - Embeds
 - Roof Openings
